Abstracts

Social Networking is the grouping of individuals into specific groups, like small rural communities or a neighbourhood subdivision, if you will. Although Social Networking is possible in person, especially in the workplace, universities, and high schools, it is most popular online. This is because unlike most high schools, colleges, or workplaces, the Internet is filled with millions of individuals who are looking to meet other people, to gather and share first-hand information and experiences about any number of topics from golfing, gardening, developing friendships and professional alliances.

Social Networking realizes many of Sir Tim Berners-Lee's original ambitions for the Web as a rich collaborative communication medium, and not just a top-down format for online publishing. It's the way the 21st century communicates now, evident from the substantial growth (or say exponential growth) in number of people using Social Networking. Conversation, Access, Usability, Engagement, Authenticity, Participation, Collaboration, Openness, Access to Information, Creativity, Passionate Interest and Personal Expression, Discussion, Asynchronous Contribution, Proactivity and Critical Thinking are some of the critical aspects of Social Networking.

There are more than 800Mn users on Facebook and millions on Twitter, Google Plus and LinkedIn, just for starters. In 2011 number of Social Networking users is around 1.2Bn which is 54 per cent of Internet users. The number will grow to 1.5Bn by 2015 and 2.7Bn by 2020. Total social networking and social media accounts at present is close to 3Bn and will be growing to 6.8Bn by 2015 and around 11.5Bn by 2020. With emergence of new players delivering specific feature or creating communities targeting niche the number of accounts per user is also increasing substantially. For businesses this is a god send. Some of the Social Networking users just might be in target audience of those providing products or services as well. They can engage with them on Social

sites to heighten brand awareness, spread their message, drive traffic to their website and boost search engine rankings, awareness and affinity. They can deepen the relationship with customers and their social connections on many levels and over time at a remarkably little cost.

Global Social Media revenue has reached \$10.3Bn in 2011, a 41.4 per cent increase from 2010 revenue of \$7.3Bn. Worldwide Social Media revenue is forecast for consistent growth with 2012 revenue totalling \$14.9Bn, and the market is projected to reach \$29.1Bn in 2014, \$58.1Bn in 2016, will touch magical mark of \$100Bn towards early part of 2018 and by the end of 2020 it will grow substantially closing at around \$233Bn.

While presently North America, Europe and Asia Pacific are substantial contributors in Social Media Marketplace there would be substantial reorganization. Asia and Oceania which contributed 30.60 per cent of global Social Media revenue in 2010 will be contributing around 35.90 per cent by 2020. North America and the Caribbean which contributed 27.60 per cent of global Social Media revenue in 2010 will be contributing around 18.70 per cent by 2020. Europe which contributed 25.30 per cent of global Social Media revenue in 2010 will be contributing around 16.30 per cent by 2020. Latin America which contributed 7.80 per cent of global Social Media revenue in 2010 will be contributing around 13.60 per cent by 2020. Middle East which contributed 4.90 per cent of global Social Media revenue in 2010 will be contributing around 6.60 per cent by 2020. Africa which contributed 3.80 per cent of global Social Media revenue in 2010 will be contributing around 9.20 per cent by 2020.

The Social Commerce market which is currently embryonic around \$7Bn up from \$5Bn sales for physical goods sold on social networks in 2010, is growing fast and revenues are set to \$30Bn by 2015 and \$80Bn by 2020. This is in addition to the burgeoning social commerce market for non-physical (virtual/digital) goods sold on social networks. The Social Commerce channel will take its place alongside stores, telesales, and traditional the Web to emerge as a significant sales channel in its own right. The role of social media in retail has evolved from a simple marketing platform for awareness and lead generation into a e-commerce-enabled sales channel. *Social Commerce Strategy and Outlook - Asia Pacific Road Map, 2nd Edition* provides a detailed analysis of Social Commerce with focus on Asia Pacific market.

Social commerce is more than just a buzzword; it's becoming the de facto way to do business online. v Social commerce in of itself, is a vast universe that covers social networks, apps, F-Commerce, mobile, Facebook Connect and Twitter @Anywhere, and

much more. As consumer needs, preferences and networks of relevance are as varied as they are concentrated, the focus of any social commerce strategy moving forward should not solely target the social consumer, but instead the connected consumer. HnyB Insights helps organisations to find a perfect mix to create successful social commerce. HnyB Insights provides research and analysis which covers world's all major Social Networks. HnyB Insights' team is equipped with knowledge of all major Social Networks across the globe which helps HnyB Insights to understand each Social network and its associated services. Research from HnyB Insights covers each and every aspect of each social network which helps organisations to choose the appropriate Social Network as well as to form a bunch of Social Networks as per their requirements.

Overview

The Internet has always been a social medium. It is unique because it is the first many-to-many communication channel, while the telephone is one-to-one and broadcast is one-to-many. The Internet is so unique because it has always been all about a common man being able to communicate with the rest of the mankind. As e-mail became more ubiquitous, discussion forums sprang up and never went away delivering knowledge to millions and people learned how to build web sites which was cheap and required neither a permit nor an advanced degree. Blogging brought together the power of the conversation with a giant leap forward in ease of use. Flickr and YouTube made uploading pictures and videos a snap. Then Facebooks and Twitters of the social world made opt-in, instant messaging so simple, it couldn't help but catch fire or create a perfect storm. It is the "great playing field leveller", allowing David to square off against the media-controlling Goliath. Internet which was always a hyper drive communication tool has now become a nuclear-powered communication tool on steroids, Technology enabled Social Communication or Social Networking and Social Media in general term.

Social Technology is a tool which allows anybody to communicate with everybody. In other words, audience/consumer-generated content distributed through easy-to-access online tools. Social Technology is capturing media, business, political, and scholarly attention. Hence their spectacular growth and the public attention they command are attracting a significant amount of research and media scrutiny. While the impact of this emerging technology development is huge it is important not to get lost in heaps of data generated on this subject. In order to leverage the true power of Social Technology one need to understand this phenomena which is a true convergence of Human Psychology, Media and Technology. Technology being the driver is a vital part of this development but the key is to understand that People are at the centre of any Social Technology

initiative.
