Immunoassay is a technique or method to detect presence of a particular substance in the human body may be an antigen, antibody, pathogen, hormone, or an enzyme. Immunoassay is based on the principle of antigen and antibody specificity. Immunoassays have been in use in the field of clinical chemistry from a long time. They are being widely used owing to their specificity and rapid test time. Beside clinical diagnostic, immunoassays are being widely used in field of research and development and quality control in pharmaceutical & biotechnology and food & beverages industry. Technological advancements, increasing test volume and shortfall of skilled workforce has led to development of automated immunoassay analyzers. These system perform all the procedures indigenously such as sample preparation, reagent and assay mixing, washing & rinsing, signal detection and result generation.
