## Abstracts

HNY Research projects that the BPA-Free Cans market size will grow from XX Million in 2017 to XX Million by 2023, at an estimated CAGR of XX %. The base year considered for the study is 2017, and the market size is projected from 2018 to 2023.

Concern over the use of BPA-based products has increased significantly in the last few years. Many organizations have invested millions of dollars on the research activities to find out the serious health hazards of BPA-based products. Also, they are continuously engaged in creating public awareness to give up on BPA containing products such as metal cans. Hundreds of research papers depicting BPA as an endocrine disruptor, has been published since last decade. However, government in most of the countries still do not find BPA harmful and hence have not banned the use of BPA in food contact applications. But the decline in use of BPA-based products in most of the developed countries is primarily driven by consumer disinterest but not by government enactments. Also, consumer disinterest in BPA-based products led food processing companies to switch their packaging products or use BPA-free coatings in their metal can packaging format which has ultimately increased the demand for BPA-free metal cans. Government in some of the countries has banned the use of BPA in food contact packaging applications after realizing its harmful health effects.
