HNY Research projects that the Cell Surface market size will grow from XX Million in 2017 to XX Million by 2023, at an estimated CAGR of XX %. The base year considered for the study is 2017, and the market size is projected from 2018 to 2023.

Cell surface markers are unique to cell types and have vital functional role in immunology. These are generally antigens or molecules present within the plasma membrane of the cell. Such markers serve as the prime component in identification and categorization of cells such as lymphocytes, macrophages, monocytes, tumor cells and other cells majorly related to immunology. Cell surface marker analysis is performed through the use of technologies namely, flow cytometry and hematology analyzers and can be carried out on various samples such as lymph nodes, blood, bone marrow and other tissues. Such analysis may allow simplification of disease diagnosis and identification, sample preparation and drug discovery. Identification of specific types of molecules through cell surface marker analysis helps in efficient disease diagnosis and thereby assists in determination of disease treatment and drugs.
