Clutch is a mechanical device that is used for engagement and disengagement of transmission from the driving shaft to the driven shaft. The primary function of the clutch is to transmit the torque from the engine side to the drivetrain. The clutch operates quietly and mitigates the drive-related vibration during its operation. Several friction materials are utilized to manufacture a clutch in order to ensure smooth engagement of gears, offer resistance, and providing strength. Organic friction materials are commonly used as friction material for clutch facing, as they offer a perfect combination of smooth engagement, wear resistance, and cost-effectiveness, as compared to others friction materials.
