## **Abstracts**

HNY Research projects that the Intraocular Lens market size will grow from XX Million in 2017 to XX Million by 2023, at an estimated CAGR of XX %. The base year considered for the study is 2017, and the market size is projected from 2018 to 2023.

An intraocular lens is an implant that is made inside the eye of the patient which is a type of synthetic and artificial lens. This intraocular lens replaces the natural lens of the eye and aids in the process of focusing power. The natural lens of the eye may be surgically removed due to cataract. When the natural lens of the eye is removed, it loses the ability to focus on any object. In order to restore vision and bring back the ability of focusing power, the intraocular lens is inserted in the eye. There is an increasing demand for intraocular lenses and this is mainly because of increasing prevalence and incidence of cataracts and other age related eye disorders. Other factor responsible for a steady growth of the global intraocular lens market is the increasing risk of cataracts among diabetic population. Besides, there are increasing technological advancements in the premium intraocular lens segment, boosting the growth of this market.
