HNY Research projects that the Off-grid Power Systems for Remote Sensing market size will grow from XX Million in 2017 to XX Million by 2023, at an estimated CAGR of XX %. The base year considered for the study is 2017, and the market size is projected from 2018 to 2023.

Off-grid power systems are those systems which are not linked with the main or local power grid. These systems are basically are dependent on a secondary source of power such as fuel cells and batteries. These off-grid systems are often employed in several circumstances such as at places where there are no grid lines, for reducing the load on the main grid, at places where power supply is unreliable, and where complete separate power is a must need. Off-grid power is being incessantly used by several monitoring systems such as LiDAR (Light Detection and Ranging) systems, SCADA (Supervisory Control and Data Acquisition) systems, and other remote monitoring devices. This market also drives demand for secondary sources of power such as fuel cells.
