Abstracts

HNY Research projects that the Recycled Plastic & Plastic Waste to Oil market size will grow from XX Million in 2017 to XX Million by 2023, at an estimated CAGR of XX %. The base year considered for the study is 2017, and the market size is projected from 2018 to 2023.

Over the past few decades, the production and consumption of plastics across the world have been exhibiting an exponential rise. Resultantly, there has been a dramatic increase in the generation of plastic waste, especially in high-income countries. The recovery of these plastics is one of the major concerns at the global scale, from an ecological as well as economical point of view. This is compelling governments to enact strict regulations against the disposal of plastics and also encourage the development of technologies that utilize waste plastic and convert it into something fruitful. These regulations are, therefore, creating a conducive environment for the global market for recycled plastic and plastic waste to oil to thrive. The rapidly emerging plastic to oil (fuel) conversion technology is anticipated to complement the conventional plastic recycling technologies. Besides this, the ever-rising demand for fuel is prompting organizations to capitalize on plastic wastes to generate oil, thereby escalating the installation of plastic to oil (fuel) systems across the globe. On the other hand, the declining prices of crude oil are adversely affecting the growth of the market.
