HNY Research projects that the Relays market size will grow from XX Million in 2017 to XX Million by 2023, at an estimated CAGR of XX %. The base year considered for the study is 2017, and the market size is projected from 2018 to 2023.

Relays are used to control circuit by low power signal. It controls several circuits by one single signal. These are the electrically operated switch that uses electromagnet to operate the switch mechanically. They are used in different application including automobiles, military and industrial automation among others. These relays are used to prevent the circuits from overload and faults. When the applied current exceeds the threshold value, the armature is activated by the coil which operates either to open the closed contacts or close the open contacts. Relays helps one circuit to switch over another circuit by separating completely from the first circuit. Asia Pacific is the largest market for relays globally at present and is expected to remain so throughout the forecast period.
