HNY Research projects that the Data Center Interconnect Platforms market size will grow from XX Million USD in 2018 to XX Million USD by 2024, at an estimated CAGR of XX%. The base year considered for the study is 2017, and the market size is projected from 2019 to 2024.

Exceptional rise in internet traffic with a dynamic migration to cloud-based services is forcing content service, network services providers, and internet service providers to enhance the connectivity of data centers. Thus, vendors of data centers are focused on building an optimized data centers interconnect (DCI) infrastructure, which is scalable, efficient, and secure. DCI is an emerging optical technology design that connects two or more than two data centers. DCI technology is supported over any pre-owned fiber or dark fiber technology, owned by any organization. DCI technology includes wavelength division multiplexing-based solutions, Ethernet over MPLS, virtual private LAN service, overlay transport virtualization (OTV), with clustering technologies such as virtual switching system (VSS) and virtual port channel (VPC). All these are utilized to connect data centers and bundle the complex links between the data center solutions. DCI is built for all types of industry in order to provide them power-efficient, high-speed optical transport facility to have smooth real-time connectivity, which eases the business transactions among various data centers. DCI ensures multiple collaborations and configurations between network service providers, interconnect content providers (ICPs), cloud, and internet service providers (ISPs).
