HNY Research projects that the EDA Tools market size will grow from XX Million USD in 2018 to XX Million USD by 2024, at an estimated CAGR of XX%. The base year considered for the study is 2017, and the market size is projected from 2019 to 2024.

Electronic design automation (EDA), also identified as electronic computer assisted design, is a class of software tools used for designing electronic systems such as integrated circuits and printed circuit boards. The tools function collectively in a design stream that the chip designer uses in order to analyze and design entire semiconductor chips. EDA tools are important for design, since modern IC (Integrated Circuit) chips are likely to have billions of components. Previously, K-Maps technique was employed to design the flow of electronic circuits. However, with electronics and technological advancements in various industries, more composite electronic circuits were essential. Such complicated designing was difficult with the help of traditional methodologies. Therefore, EDA tools were designed to solve the composite designing issue of electronic circuits.
