HNY Research projects that the Health Care Information Systems market size will grow from XX Million USD in 2018 to XX Million USD by 2024, at an estimated CAGR of XX %. The base year considered for the study is 2017, and the market size is projected from 2018 to 2023.

The healthcare information systems market has progressed from being in a nascent phase in the 80s to a thriving market in recent years due to quicker adoption rates of healthcare information systems and demand for them from large as well as smaller health care organizations. Digitization of health care records has created a far more informed, innovative, and personalized care paradigm. Digitized records enable physicians to recognize warning signs for individuals who are on the edge of major health issues, thus preventing expensive treatments and hospitalizations. Health care information technology has been shown to improve the quality to care management by enhancing disease surveillance, increasing adherence to guidelines, and decreasing medication error. The global health care information systems market has expanded rapidly over the years, and there has been a noticeable rise in adoption of health care information systems in recent times. Continued increase in the cost of health care over the last few years has forced health care institutions to adopt health care IT systems in order to cut costs. About 30% of the health care costs arise due to clinical insufficiencies.
