The global Air Quality Electrostatic Precipitators market was valued at 1049.03 Million USD in 2021 and will grow with a CAGR of 1.85% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

An Electrostatic Precipitators (ESP) is a filtration device that removes fine particles, like dust and smoke, from a flowing gas using the force of an induced electrostatic charge minimally impeding the flow of gases through the unit. Though Europe is planning to add the implementation of clean energy electricity, but until 2017, coal-fired power generation is still the major power source of Europe and it has increased in some countries, so we tend to give a positive future of Europe ESPs market, but the growth rate will not be fast.
