Aluminum Lithium Alloys is one kind of alloys which mainly includes aluminum and lithium, it also has some other elements, like copper, zirconium and so on. The key composition is aluminum and it occupies higher than 95%. Aluminum-lithium alloys (Al-Li) are a series of alloys of aluminum and lithium, often also including copper and zirconium. Since lithium is the least dense elemental metal these alloys are significantly less dense than aluminum. Commercial Al-Li alloys contain up to 2.45% by weight of lithium. The Aluminum Lithium Alloys is first used in the astronautics and aeronautics region. The aluminum lithium alloys belongs to a monopoly industry, only very little companies can produce. The companies are mainly concentrated in the USA, UK and Russia. The production of USA has exceeded 60% of global. The Aluminum Lithium Alloys has great demand in different region, but currently it mainly concentrates in the astronautics and aeronautics region. Generally, this product needs import from the USA and Europe. The aluminum lithium alloys needs high technology content and the manufacture technology are grasped only several countries, such as USA, Russia, UK.
