The global Automotive Collision Avoidance Systems market was valued at 6388.26 Million USD in 2021 and will grow with a CAGR of 8.55% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A collision avoidance system, also known as a precrash system, forward collision warning system, or collision mitigating system, is an automobile safety system designed to prevent or reduce the severity of a collision. It uses radar (all-weather) and sometimes laser (LIDAR) and camera (employing image recognition) to detect an imminent crash. Radar-based systems accounted for over 40% of the global market in 2017. The segment is further expected to gain market share during the forecast period. The reducing prices of radars have led to the increased adoption of the technology by various automotive OEMs.
