An air purifier or air cleaner is a device which removes contaminants from the air in a room. These devices are commonly marketed as being beneficial to allergy sufferers and asthmatics, and at reducing or eliminating second-hand tobacco smoke. The automobile industry is dynamic in nature, and it continuously adopts advanced technologies for enhancing the customer experience. Interior cabin space of automobiles has evolved rapidly in terms of upholstery, automation of seats, and infotainment. This cabin space faces the most challenging environment as it is prone to polluted air, smoke, toxic fumes, bad odor, food smell, and pollens, which either get absorbed to the upholstery or float the air, making passengers prone to diseases. Globally, major cities are prone to smog and high pollutant concentrations owing to traffic congestion and increased emissions, which gives rise to the need for installation of onboard air purifiers or ionizers to purify the cabin air from harmful toxicants. Demand for clean & toxin-free cabin air and increase in air pollution level worldwide are the key

drivers of automotive in-vehicle air purifiers. However, non-standardized products act as a major restraint to this growth.
