The global Automotive Night Vision Systems market was valued at 323.8 Million USD in 2021 and will grow with a CAGR of 16.59% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Automotive night vision system (NVS) is an advanced driver assistance systems that help increase driver awareness when it's dark out. The system extends the perception of the driver beyond the limited reach of the headlights through the use of thermographic cameras, infrared lights, heads up displays, and other technologies. Since automotive night vision can alert drivers to the presence of potential hazards before they become visible, these systems can help prevent accidents. Market competition is not intense. The production proportion of top 3 is 78.3% in 2015. Autoliv, Bosch, Delphi, etc. are the leaders of the industry, and they hold key technologies and patents, with high-end customers; have been formed in the monopoly position in the industry. With the development of society and the changing of consumer demand, the Automotive Night Vision Systems industry will be more and more popular in the future.
