Abstracts

The global Automotive Performance Suspension System market was valued at 257.89 Million USD in 2021 and will grow with a CAGR of 9.25% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The system is integrated with an on-board compressor that feeds compressed air into the airbags to absorb the impact from road bumps from reaching the vehicle cabin. High-performance vehicles need performance suspension systems that can dynamically adjust themselves to the driving conditions. A key factor driving the growth of the market is the increasing adoption of air suspension systems. Air suspension systems are innovative suspension systems mainly used in heavy commercial vehicles to reduce vibration and engine noise. They improve vehicle handling to a large extent by automatically adjusting the height of the vehicle according to vehicle speed and reducing resistance to wind while driving on highways. Vehicle makers are replacing the conventional coil-spring-based suspension system in high-performance cars with advanced air-suspension systems to increase the handling comfort of the vehicles.
