Abstracts

The global Baby Care Products market was valued at 6484.11 Million USD in 2021 and will grow with a CAGR of 4.69% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The baby care products market has been segmented into baby cosmetics and toiletries, baby safety and convenience products, and baby food/formula. Of these, the baby food/formula segment accounted for major share of the market in 2017. It was followed by the baby cosmetics and toiletries segment, which has been further split into baby skincare, baby hair care, baby bath, diapers, and others (including baby wipes and fragrance). The baby skin care sub-segment is further divided into baby massage oil, baby lotions, cream/moisturizers, and talcum powder. Preference for specific products among parents has boosted the demand for baby care products. However, internet marketing for baby care products has not emerged significantly in developing countries such as Russia, India, and China. This is anticipated to adversely affect the baby care products market in these countries. Increase in infant population, high spending capacity of the people, rising number of women in the workforce and health concerns of consumers are key drivers to propel the market. In addition, convenience of the Baby Care product is another factor to drive the market. Organized retail stores provide convenience to the consumers by offering several product brands under the same roof

and provide them variety among numerous brands. Regionally, Asia Pacific held the major share in the global market in 2018 and is expected to hold the sway throughout the forecast period. This can be attributed largely to the substantial rise in discretionary spending by parents, especially in emerging economies, on various healthcare products for the wellness of their babies.
