Baking is a cooking technique that uses a high degree of dry heat for a prolonged period. While baking, heat is gradually transferred from the surface of the dough, transforming it into a cooked and baked product with a soft center but a firm, dry outer crust. To enhance the quality of the product, various ingredients are added to the dough or mixture while baking. Baking ingredients enhance the taste, texture, consistency, and color of baking products. Europe accounted for the largest market share for baking ingredients, followed by North America and Asia-Pacific. Ingredients such as baking powder, baking mixes, leavening agents, and enzymes are among the most widely used ingredients in Europe
