Bioactive ingredients refer to supplementary bio-molecules that are present in foods to adapt one or more metabolic progression for superior health. Bioactive food ingredients are typically found in multiple forms such as glycosylated, esterified, thiolated, or hydroxylated. Bioactive food ingredients are useful for numerous metabolic activities and for beneficial effects in various diseases including cancer, cardiovascular disease, macular degeneration and diabetes. Bioactive ingredients are also helpful in anemia, rickets and malnutrition, which normally occur due to lack of balance diet and insufficient intake of nutritional foods. Bioactive ingredients are bio-molecules added to food products to help in the metabolic process for improved health. They also play a significant role in filling the gap for the lack of balanced diet and insufficient intake of nutritional food. The increased awareness of health concerns among consumers is the primary driver for the growth of this market. The stringent rules and intense regulatory scrutiny for the utilization of food ingredients pose a challenge for the growth of the market. The market in the Asia-Pacific region dominates, with the highest growth rate and share. The market holds power here because of the ever-growing population and

urbanization in various developing nations of the region. The market here is expected to experience a growth of 7.4% from 2013 to 2018. The four nations with the most potential in the bioactive industry are India, China, Brazil, and Russia.
