Board-to-board (BTB) connectors are used to connect printed circuit boards (PCB), electronic components that contain a conductive pattern printed on the surface of the insulating base in an accurate and repeatable manner. Each terminal on a BTB connector is connected to a PCB. A BTB connector includes housing and a specific number of terminals. The terminal is made from a conductive material (mostly copper alloy), and plated to improve conductivity and antirust. Terminals transmit the current/signal between PCBs connected by BTB; the housing is made of insulating material (mostly plastic).The global Board-to-board Connectors production reached 3870.57 M Units at the end of 2016, and is forecasted to reach 5100.83 M Units. North America, Europe and China are major regions produce Board-to-board Connectors in the world, accounting for more than 65.70% of the world. APAC dominates the global demand market for Board-to-board Connectors and the trend is anticipated to continue for a foreseeable future. APAC is expected to account for the largest share of the global

Board-to-board connector market in 2016. The demand for industrial Internet of Thing is high in the APAC region with special focus on process automation. In countries such as Japan and China where the automobile market has opportunities supported by electric vehicles, the consumption of connectors is high. The APAC region is a huge hub for consumer electronics market which in turn increases the demand for connectors in this region.
