## Abstracts

The global Borosilicate Glass market was valued at 1083.49 Million USD in 2021 and will grow with a CAGR of 2.08% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Borosilicate glass is a type of glass with the main glass-forming constituents of silica and boron trioxide. Borosilicate glasses are known for having very low coefficients of thermal expansion, making them resistant to thermal shock, more than any other common glass. Such glass is less subject to thermal stress and is commonly used for the construction of ampoule bottle, etc. Tip: At present, many players directly manufacture their own borosilicate glass into downstream products such as laboratory instruments and pharmaceutical packaging. The added value has increased several times and the data cannot be counted. Therefore, the report only deals with primary forms of products, namely primary forms of glass tubes, glass rods, and glass plates.
