The global Cage Free Eggs market was valued at 1486.91 Million USD in 2021 and will grow with a CAGR of 2.68% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The concern for animal welfare has increased significantly in the past decade. With animal organizations setting up and campaigning against poultry and egg manufacturers, many companies are taking up initiatives for farm animal welfare. Cage free eggs market in the Europe region has witnessed significant growth after egg manufacturers have collaborated with animal welfare organizations. It is noticed that the lifestyle of hens affects their health and alters the nutrition status of the eggs. Studies have reported that cage free eggs have larger and deep orange yolks, which are known to have more fatty acid levels but no effect on the levels of cholesterol and are also tastier as compared to the conventional cage laid eggs. Sensitivity towards animal welfare is relatively high in the Europe market than developing and underdeveloped markets. Despite increased cost of production and maintenance of cage free eggs, big manufacturers are compelled to cater to the demand of retailers. This demand has prompted manufacturers to opt for cage free egg manufacturing rather than conventional caged production. Increasing pressure by the government on manufacturers to switch to the production of cage free eggs is also boosting the growth

of the market.
