The global Capillary Rheometer market was valued at 3131.83 Million USD in 2021 and will grow with a CAGR of 4.33% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Capillary rheometry has its origins in polymer melt processing, but is also directly relevant to many other material processes such as high speed coating and printing applications. Based on controlled extrusion of a test material, capillary rheometry enables material flow and deformation properties to be characterized under conditions of high force (or pressure), high shear rate and at elevated temperature. In consumption market, the growth rate of global consumption is smooth relatively. North America and Europe are still the mainly consumption regions due to the advanced production technology and rapid development of economy. The consumption of North America are accounting for 22.25% while the Europe are accounting for 20.14%.
