Car Navigation Systems is a satellite navigation system design. It uses the Global Positioning System (GPS) to attain the user's position data and locates them on the road in the system's map database. GPS is a radio positioning system combining computer mapping techniques depending on the information time as well as the velocity for providing three-dimensional positions to appropriately equip the users anywhere on or near the surface of the earth. The first OEM GPS navigation systems were relatively primitive by modern standards, but the technology progressed quite rapidly. When a more accurate GPS signal was made available to civilians in the early 2000s, OEM navigation systems became ubiquitous almost overnight. Today, OEM navigation systems form the hearts of many highly-integrated infotainment systems. These powerful infotainment systems often take charge of the climate controls, provide access to vital information about the condition of the engine and other systems, and typically offer some type of navigation option. While some, such as Kia's UVO, don't offer navigation, that option is typically offered in a separate package. And if your vehicle didn't come with GPS from the factory, it's often possible to retrofit it with an OEM unit.

Some vehicles even have all of the wiring in place, which makes it a remarkably painless upgrade to perform.
