Carbon fibers or carbon fibres (alternatively CF, graphite fiber or graphite fibre) are fibers about 5-10 micrometers in diameter and composed mostly of carbon atoms. Carbon fibers have several advantages including high stiffness, high tensile strength, low weight, high chemical resistance, high temperature tolerance and low thermal expansion. These properties have made carbon fiber very popular in aerospace, civil engineering, military, and motorsports, along with other competition sports. However, they are relatively expensive when compared with similar fibers, such as glass fibers or plastic fibers. Asia and Pacific is expected to remain the largest region through 2017.
