Carbon Brush is a device which conducts current between stationary wires and moving parts, most commonly in a rotating shaft. Its basic applications are electric motors, alternators and electric generators. The characteristics of carbon brush material measured by carbon brush manufacturers are as follows: self-lubrication, conductivity, durability, and rid ability during sliding contact. Since the high-end products have huge demand in both China`s and global market, many local companies attempt to enter the high-end production competition. Currently, China`s carbon brush industry is transiting to produce high-end products; furthermore, it offers benefits to the entire industrial chain.
