The global Cationic Conditioning Polymers market was valued at 357.38 Million USD in 2021 and will grow with a CAGR of 6.73% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Conditioning polymers help hair and skin look and feel better by improving the physical condition of these surfaces. Hair conditioners are intended primarily to make wet hair easier to detangle and comb and to make dry hair smoother, shinier, and more manageable. Skin conditioners primarily moisturize, while providing protection from the drying effects of the sun, wind, and contact with harsh detergents. The common cationic polymers used as conditioners in hair and skin care applications are based on guar gum, cellulose, proteins, polypeptides, chitosan, lanolin, starches, sugars and amino silicones. However, most of products are based on cellulose quaternary ammonium salts. Also, guar gum polymer derivatives are playing an increasingly important role on the market, especially in the past decade. In 2017, Cationic Guar Conditioning Polymers is estimated to take 34.82% of the market while share of Cationic Cellulose Conditioning Polymers is estimated to be 55.26%.
