## **Abstracts**

The global Chemically-strengthened and Sapphire Glass market was valued at 1517.25 Million USD in 2021 and will grow with a CAGR of 2.91% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Chemically-strengthened Glass is glass that has been treated with a chemical process after it was manufactured to render it stronger. The chemical process is called an ion-exchange reaction. During this process, glass is submerged in a bath of potassium salt or potassium nitrate at 300 degrees Celsius. The bath isn't hot enough to melt the glass, but the relatively high temperature allows the potassium nitrate to react with the surface of the glass, causing ions to be exchanged and compacted, thereby strengthening the glass. Sapphire is a single crystal of alumina with a unique lattice structure, wear resistance and wind erosion resistance, and its hardness is second only to diamond. It has excellent light transmittance, special conductivity and electrical insulation, and is an ideal substrate material for LEDs and SOS. In recent years, sapphire has officially entered the consumer electronics market, and consumer electronics has opened up new market space for the sapphire industry. Corning was the global largest manufacturer in the Chemically-strengthened and Sapphire Glass

industry, accounted for maximal market share about 70% in the global market. The industry is led by the Asia Pacific area, accounting for about 99.36% of global consumption of Chemically-strengthened and Sapphire Glass in 2018. The consumption of Chemically-strengthened and Sapphire Glass is expected to show a trend of steady growth.
