## **Abstracts**

The global Chromatographic Silica Resins market was valued at 1909.73 Million USD in 2021 and will grow with a CAGR of 4.57% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Due to the stable economic growth in emerging economies such as China and India, a good number of opportunities will be created for the chromatographic silica resin market during the assessment period. There is a huge demand for pharmaceutical products in these countries. Moreover, the demand for chromatographic resins like silica gel is also increasing in agriculture, food and beverage and biotechnology industries as well as in academic institutes and R&D labs. In addition, tremendous growth in China and India has resulted in increased government expenditure on healthcare and biomedical industries. In addition, food security concerns in India have prompted the government to invest hugely in agriculture and soil testing. Similarly, strategic expansion of chromatography players in China can be a boon for the chromatographic silica resin market. Also, the presence of bio-clusters in these countries may also propel the chromatographic silica resin market in the near future. The stable growth of pharmaceutical and biotechnology industries is expected to boost the global

chromatographic silica resin consumption over the forecast period. As far as the pharmaceutical industry is concerned, silica gel column chromatography is used to segregate and collect different components of a drug. This has application in the purification of antibiotics such as rosarimicin, coloradocin and benzanthrins, among others. Silica resin chromatography is also used in the study of medicines such as hypnotics, sedatives, analgesics, local anesthetics and steroids. Chromatography also finds use in the field of biotechnology where it is used due to its ability to detect molecular components such as nucleic acids, fats, carbohydrates, protein and vitamins. Protein is the most desired component in a number of medicines and supplements and holds a high degree of importance in biopharmaceuticals. Size-exclusion chromatography is widely used for the purification and analysis of synthetic and biological polymers. Chromatographic silica resin is used in thin-layer chromatography for biomedical analysis. There is a growing demand for medicines, especially in developing economies such as China and India, and this is expected to drive the demand for biopharmaceuticals, which in turn will drive the growth of the chromatographic silica resin market during the assessment period.
