## **Abstracts**

The global Coordinate Measuring Machine (CMM) market was valued at 502.27 Million USD in 2021 and will grow with a CAGR of 5.29% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A coordinate measuring machine (CMM) is a device for measuring the physical geometrical characteristics of an object. This machine may be manually controlled by an operator or it may be computer controlled. Measurements are defined by a probe attached to the third moving axis of this machine. Probes may be mechanical, optical, laser, or white light, among others. A machine which takes readings in six degrees of freedom and displays these readings in mathematical form is known as a CMM. Regionally, Europe is the biggest Consumption area of Coordinate Measuring Machine (CMM) in the world and China is the most potential market with the fastest growing rate of 16.19%. From the view of application market, 45.51% is the most active and potential field because of the widely use of Automotive Industry in 2015. Although there is big difference between big companies such as Hexagon with new companies, especially in the price of products, customers still willing to pay more money to achieve products or service with higher quality. Therefore, it will become harder and harder for a

new company which doesn't have its own core technology and R&D team to survive in this Technology-intensive battle. As a new kind of materials for Coordinate Measuring Machine (CMM), the Consumption process will become mature gradually with more and more companies enter this field.
