The global Cryopump market was valued at 44.46 Million USD in 2021 and will grow with a CAGR of 3.07% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A cryopump or a 'cryogenic pump' is a vacuum pump that traps gases and vapours by condensing them on a cold surface, but are only effective on some gases. The effectiveness depends on the freezing and boiling points of the gas relative to the cryopump's temperature. They are sometimes used to block particular contaminants, for example in front of a diffusion pump to trap backstreaming oil, or in front of a McLeod gauge to keep out water. In this function, they are called a cryotrap, waterpump or cold trap, even though the physical mechanism is the same as for a cryopump. Cryopump is mainly classified into four types: <math>1000\text{std. liter}</math>, <math>1000\text{-}2000\text{std. liter}</math>, <math>2000\text{-}4000\text{std. liter}</math>, <math>4000\text{std. liter}</math>. Cryopump between <math>1000\text{-}2000\text{std. liter}</math> are the most widely used type which takes up about 53% of the global total in 2016, followed by <math>2000\text{-}4000\text{std. liter}</math> with share of about 27%. SHI?Cryogenics?Group, Ulvac, Brooks, Leybold, Trillium, PHPK?Technologies and Vacree are the key producers in the global cryopump market. Top seven took up about 80% of the global production in 2016.
