The global Doppler LiDAR Systems market was valued at 108.57 Million USD in 2021 and will grow with a CAGR of 9.87% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A Doppler wind Lidar used for atmospheric purposes, measures the frequency shift (Doppler shift) of narrow bandwidth laser light backscattered from microscopic particles or aerosols in the air being transported by the wind. Growing need for accurate weather predictions to carry out onshore operations, increasing demand for effective air traffic control at airports, and rising need for innovative numerical weather prediction models are the major factors expected to drive the growth of the Doppler Lidar Systems market between 2017 and 2022. Governments of various countries and private agencies have been investing increasingly in the development of advanced and efficient weather forecasting systems to provide alerts for storms or cyclones beforehand to ensure public safety. This further drives the growth of Doppler Lidar Systems market.
