The global Home Energy Monitor market was valued at 195.85 Million USD in 2021 and will grow with a CAGR of 9.57% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A home energy monitor provides feedback on electrical energy use. Devices may also display cost of energy used, and estimates of greenhouse gas emissions. Various studies have shown a reduction in home energy use of 4-15% through use of home energy display. Electricity use may be measured with an inductive clamp placed around the electric main, via the electric meter (either through an optical port, or by sensing the meters actions), by communicating with a smart meter, or by direct connection to the electrical system. The display portion may be remote from the measurement, communicating with the sensor using a cable, network, power line communications, or using radio. Online displays are also available which allow the user to use an internet connected display to show near real-time consumption. Home Energy Monitor is mainly classified into the two types: solar ready type, non-solar ready type. Non-solar ready type is the most widely used type which takes up about 53% of the total sales volume in 2019. North America is the largest region of Home Energy Monitor in the world. North America market took up over 42% the global Home Energy Monitor revenue market in 2019, while Europe and Asia-Pacific were about 41% and about 10%. Sense, Schneider
