Refining catalyst is a substance that aids in the conversion of petroleum refinery naphthas into high-octane liquid products. Besides, it also converts low octane hydrocarbons into cyclic naphthalenes and other branched alkanes. Then, these are again dehydrogenated to produce aromatic hydrocarbons with high octane number. Refining catalyst produces high valued elements that are used in petrochemicals, diesel, and gasoline. Refinery catalyst production is concentrated relatively and is a technology-intensive industry. Currently, there are several producing companies in the world refinery catalyst industry, more of which are located in USA. The main market players are Grace Catalysts Technologies, BASF, Albemarle, Criterion, Johnson Matthey, Haldor Topsoe, UOP (Honeywell) and others. The global production of refinery catalyst will increase to 1052.07 K MT in 2019 from 881.12 K MT in 2014 with the 3.61% average growth rate.
