Tertiary amine is an amine that has the following general structural formula. In tertiary amines, nitrogen has three organic substituents. Examples include trimethylamine, which has a distinctively fishy smell, and EDTA. The use of tertiary amines is very extensive and is an important intermediate for the preparation of quaternary ammonium salts. It is widely used in the production of asphalt emulsifiers, chemical antistatic agents, foaming agents, oilfield demulsifiers, pesticide emulsifiers and fabric softeners. The global average price of Tertiary Amines is in the decreasing trend, from 3292 USD/MT in 2012 to 3144 USD/MT in 2016. With the situation of global economy, prices will be in decreasing trend in the following five years.
