The global Thermal Desorption Instrument market was valued at 21.77 Million USD in 2021 and will grow with a CAGR of 2.7% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Thermal Desorption Instrument is the instrument adopts thermal desorption theory to increase the volatility of dependents or contaminants such that they can be removed (separated) from the solid matrix (typically soil, sludge or filter cake). Thermal desorption is not incineration. The volatilized contaminants are then either collected or thermally destroyed. A thermal desorption system therefore has two major components; the desorber itself and the offgas treatment system. It is an environmental remediation technology that can be utilized in environmental air monitoring and exposure to chemicals at work, residual volatiles and materials emissions testing, food, flavour, fragrance & odour profiling, and defence and forensic, etc. The consumption volume of thermal desorption instrument is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of thermal desorption instrument market might be slightly slow. But it is surely forecasted that the market of thermal desorption instrument is still promising. Due

to the high technology level and market requirements in the developed countries, the market is currently dominated by a handful of companies that own the core technologies, including Markes International, PerkinElmer and Beijing BCHP and so on. The USA and the Europe lead the global thermal desorption instrument market. The strong USA economy and the sturdier EU economic recovery both provide good external conditions for thermal desorption instrument consumption. And China is expected to increase due to growing awareness of environmental protection.
