Abstracts

The global Tire Reinforcement market was valued at 1278.47 Million USD in 2021 and will grow with a CAGR of 3.3% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Reinforced tires are rigid, offer stability, better traction, greater adhesion properties, and are more resistant to mechanical damage. Besides the capability to carry the extra load, these tires have a longer life than normal tires and are not prone to internal damages. Reinforced tires have more usage in vans, trucks, estate cars, sports cars, and delivery vehicles as they can withstand higher pressure and increased load capacity. Several reinforcement materials used in tires include steel cord fabric, steel bead wire, polyester cord fabric, rayon cord fabric, aramid cord fabric, nylon cord fabric, and other materials. These materials confer structural, mechanical, and physical properties to tires. The latest development in the market is the growing demand for eco-friendly tires, which has compelled vendors to shift towards the usage of natural and recycled materials like ground rubber, orange oil, and low-aromatic oils to manufacture tires.
