The global 1,3-butylene Glycol (CAS 107-88-0) market was valued at 84.24 Million USD in 2021 and will grow with a CAGR of 5.74% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

1,3-Butanediol (also known as 1,3-butylene glycol, butane-1,3-diol, or 1,3-dihydroxybutane) is a diol used as a chemical intermediate in the manufacture of polyester plasticizers and other products. It finds some use as a solvent for flavorings and as a humectant in pet foods, tobacco and cosmetics. It is one of four stable structural isomers of butanediol. In biology, 1,3-butanediol is used as a hypoglycaemic agent. 1,3-Butanediol can be converted into γ -hydroxybutyrate and serve as a substrate for brain metabolism. As international economic situation is complicated, in the next few years there will be many uncertainties although. There are few companies enter into 1,3-Butanediol industry due to the business opportunities. The current demand for 1,3-Butanediol product is relatively low in the mature market, such as Europe and North America, but the demand in China is relatively higher due to the continuous development of downstream industries. The global production of the 1,3-Butanediol reaches 23358 MT in 2016; the growth rate range is about 6.64% to 4% during the last five years. Although sales of 1,3-Butanediol brought a lot of opportunities, the study group recommends the new entrants who just having money but without technical advantage and downstream support, do not to enter into the 1,3-Butanediol field hastily.
