Abstracts

The global 3-aminopropyltriethoxysilane market was valued at 11.96 Million USD in 2021 and will grow with a CAGR of 1.16% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

3-aminopropyltriethoxysilane is produced by triethoxysilane and NH₃ in autoclave reaction. In the acrylonitrile process, cyanoethylsilane is thoxylated and then hydrogenated over Raney nickel at high hydrogen pressure. The ammonia substitution process starts from chloropropyltriethoxysilane, and requires a large excess and high pressure of NH₃. With a 75-fold molar quantity of NH₃ with respect to the chloro component, selectivities for the primary amine of up to 8% have been reported. The correspondingly low space-time yields can only be improved if increased proportions of di- and even trisubstituted downstream products of the initially formed aminopropylsilane are acceptable. 3-Aminopropyltriethoxysilane is the aminosilane used as adhesion promoter for both adhesive and sealant formulations to improve substrate adhesion. 3-aminopropyltriethoxysilane is mainly used in glass fiber application at 61.22% in 2015. The second large demand is rubber with 25.51% while only about 10% of 3-aminopropyltriethoxysilane is used in coating.

3-aminopropyltriethoxysilane industry is a relatively concentrated market, the first company accounts for about 20% of production volume. Jingzhou Jiangnan and Hubei Bluesky are also large companies accounting for about 13% of the market. As Chinese

overall economic downward trend in the past few years, and international economic situation is complicated, in the next few years there will be many uncertainties, and coupled with 3-aminopropyltriethoxysilane industry in short supply on the market in the past few years, more and more companies enter into 3-aminopropyltriethoxysilane industry. So it would be more competitive.
