Abstracts

The global 3D Cell Culture market was valued at 703.84 Million USD in 2021 and will grow with a CAGR of 13.08% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A 3D cell culture is an artificially-created environment in which biological cells are permitted to grow or interact with their surroundings in all three dimensions. Unlike 2D environments (e.g. a petri dish), a 3D cell culture allows cells in vitro to grow in all directions, similar to how they would in vivo. These three-dimensional cultures are usually grown in bioreactors, small capsules in which the cells can grow into spheroids, or 3D cell colonies. Approximately 300 spheroids are usually cultured per bioreactor. The global 3D cell culture market is relatively concentrated; the sales of top nine manufacturers are Thermo Fisher Scientific, Corning, Lonza Group, Kuraray Co, Merck KGaA, Insphero, N3d Bioscience, Reproncell Incorporated and 3D Biotek, etc, totally account about 68% of total global Production. The largest manufacturer of 3D cell culture is Thermo Fisher Scientific, with about 22% market share. The next is Corning and Lonza Group. North America is the largest consumption region of 3D cell culture, its sales proportion of total global sales exceeds 36%.
