3D printing or additive manufacturing is a process of making three dimensional solid objects from a digital file. While 3D-Printed Composites is a very important 3D printing material, mainly used in aerospace and automotive.3D-Printed Composites industry is concentrated relatively. Currently, there are many producing companies in the world. The main market players are Stratasys, 3D Systems, EOS, 3Dynamic Systems, Arevo Labs and 3DXTECH. The production of 3D-Printed Composites increased to 1477 MT in 2017 from 212 MT in 2013 with average growth rate of 47%. In consumption market, North America and Europe are the mainly consumption regions due to the bigger demand of downstream applications. In 2017, these two regions occupied 92.5% of the global consumption volume in total. Carbon fiber is the primary opportunity in composite thermoplastic pellets. However, glass fiber composite filaments and pellets are also expected to grow significantly in terms of use. Other materials such as Nano ceramics and Aramid fibers are also expected to play a minor role in the composite AM landscape. Carbon nanotubes (CNTs) may also have a niche role to play here.
