The global 3D Printed Orthopedic Implants market was valued at 1407.69 Million USD in 2021 and will grow with a CAGR of 14.92% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

3D printing, also known as additive manufacturing, is different from the subtractive processing technology. It is based on the patient's X-ray computed tomography or magnetic resonance imaging to establish a CAD model (Computer aided design, CAD). It needs modern technologies such as electron beam technology and material science, and starts from the CAD model of the part, and realize the construction of three-dimensional complex entities by positioning the stacked materials layer by layer. Approximately 13% of all 3D printing revenues come from the medical industry. Orthopedic implants are the first medical application field where 3D printing technology is industrialized. Because the 3D orthopedic implant printing technology can customize the shape of the implant according to the needs of the patient, and can precisely control the complex microstructure of the implant, it can realize the dual adaptation of the shape and mechanical properties of the implant to the human bone. Therefore, it is favored in the field of orthopedic implants and developed rapidly. At present, the research on the metal raw materials of 3D printing orthopedic implants mainly focuses on titanium and titanium alloys. Hot metal materials that have emerged in recent years, such as tantalum, magnesium, zinc, etc., are still in the research stage due to their

imperfect material properties and have not yet been clinically applied. According to regions, North America dominated the entire market of the 3D printed orthopedic implants with about 78% of the global market share in 2019, much more than other regions. Among the different types of 3D printed orthopedic implants, the metal type held the maximum market share with about 72% in 2019.
