### Abstracts

The global 5G Base Station market was valued at 3205.48 Million USD in 2021 and will grow with a CAGR of 1.51% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The 5G base station is the core device of the 5G network. The architecture and configuration of the base station directly affect the deployment strategy of the 5G network. The ITU defines eMBB, mMTC, and URLLC for 5G (three major application scenarios). Typical applications for eMBB include ultra-high definition video, virtual reality, augmented reality, and more. Key performance metrics include 100Mbps user experience rates (up to 1Gbps for hotspot scenarios), tens of Gbps peak rates, tens of Tbps per square kilometer, and mobility of more than 500km per hour. Typical applications for URLLC include industrial control, drone control, intelligent driving control, etc. These scenarios focus on services that are extremely sensitive to latency, and high reliability is also a basic requirement. Typical applications for mMTC include smart cities, smart homes, and more. Such applications require high connection densities while presenting industry diversity and differentiation. The base station studied in this report includes NSA base stations and SA base stations. In the initial stage of network construction, there are a large number of NSA base stations and macro base stations, and the voice solution adopts VoLTE or falls back to 2G and 3G. In the later stage of 5G network construction, there are more SA base stations, and there will be

VoNR voice solutions specially applied to 5G, and the small base stations will be rapidly popularized due to the high frequency characteristics. On the basis of type, the 5G base station market is segmented into macro, small, and so on. The Macro segment accounts for the larger share of the global market in 2019. Rapidly-developed 5G technology will bring considerable market space to 5G base station suppliers. Leading global suppliers include Huawei, Ericsson, Nokia, ZTE, and Samsung. These five suppliers account for about 96% of the global market share in 2019.
