Laser printing is an electrostatic digital printing process. It produces high-quality text and graphics (and moderate-quality photographs) by repeatedly passing a laser beam back and forth over a negatively charged cylinder called a 'drum' to define a differentially charged image. The drum then selectively collects electrically charged powdered ink (toner), and transfers the image to paper, which is then heated in order to permanently fuse the text and/or imagery. As with digital photocopiers, laser printers employ a xerographic printing process. However, laser printing differs from analog photocopiers in that the image is produced by the direct scanning of the medium across the printer`s photoreceptor. This enables laser printing to copy images more quickly than most photocopiers.In this report, the statistical data is focused on the A4 laser printer. The A4 laser printer means that the maximum paper handling size of laser printer is A4. A4 Laser Printer used in SOHO, SMB, Corporate and family, governments and individuals used. A4 Laser Printer mainly has two kinds, including Single Function A4 Laser Printer and Multifunction A4 Laser Printer. The production market share of Single Function A4 Laser Printer is 68.06% in 2015.
