The global Absorbable Surgical Sutures market was valued at 3580.93 Million USD in 2021 and will grow with a CAGR of 4.97% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Surgical sutures are used by doctors to close the wounds or an opening of a damaged tissue. An absorbable suture crumbles in the body through enzymatic or hydrolysis reactions taking place in the human body. The absorbable sutures were formerly made from sheep`s intestine. Absorbable sutures are used for sewing of deep tissues which breaks down in the body within ten days to four weeks depending on the suture composition. In the absorbable surgical sutures market, North America is anticipated to account for the largest market share due to the early adoption of advanced medical technologies, the rise in awareness, the rise in growth of the healthcare sector, and due to favorable compensation setting for many surgical procedures.
