The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Acrylic surface coatings are fast-drying paints comprising pigments suspended in acrylic polymer emulsion. These coatings are made up of a methacrylic or acrylic polymer that possesses strong color retention property. Acrylic coatings are soluble in water; however, they become water-resistant in the dry state. Different technologies used in acrylic surface coatings include waterborne coating, solvent-borne coating, and powder coating. Acrylic surface coatings are characterized by properties such as high surface hardness and elastomeric finish when applied as roof coating on buildings. Among the various applications, the construction segment held the largest share in the global acrylic surface coating market. Construction is one of the most dynamic industrial sectors, owing to the increasing urbanization. Therefore the segment is anticipated to retain its dominance throughout the forecast period.
