## Abstracts

The global Actigraphy Sensors and Polysomnography Devices market was valued at 1264.91 Million USD in 2021 and will grow with a CAGR of 5.37% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

An actigraph, also referred to as an actometer or actimeter, is a wrist-worn activity monitor that is used to monitor movement and sleeping/waking patterns over an extended time period. The actigraphy device may be placed on the wrist, ankle, or trunk. In most studies, it is worn on the non-dominant wrist since the wrist detects more movement than the ankle or trunk. The actigraphy device includes a small accelerometer that monitors and records the occurrence and degree of motion. It can collect data continuously over an extended period of more than one week. The Actigraphy Sensors and Polysomnography Devices market is very concerted market; the revenue of top twelve manufacturers accounts about 78% of the total revenue in 2018. The high-end products mainly come from USA and Europe.
