Activated alumina is a form of aluminum oxide that is very porous and bonds with certain liquids and gases without its chemical or physical form changing. Due to its high porosity, it has a high ratio of surface area to weight. It is commonly used as a desiccant, for water treatment, and as a catalyst in natural gas and refining operations. Currently, there are many producing companies in the world. The main market players are Honeywell UOP, Axens, CHALCO, BASF SE, Porocel Industries and so on. North America is the largest production regions of Activated Alumina, with a production value market share nearly 43.69% in 2016. The second place is China; following North America with the production value market share over 18.85% in 2016. Activated Alumina used for Fluoride Adsorbent, Desiccant, Catalyst, Refractory Additives. And others. Report data showed that 39.92% of the Activated Alumina market demand for Catalyst in 2016. There are two kinds of Powdered Form Activated Alumina and Sphered Form Activated Alumina. Back- end Activated Alumina is important in the Sphered Form Activated Alumina, with a Production market share nearly 84.54% in 2016.
